CALL FOR PAPERS: "New Theory Development for Behavioral IS Security Research"

Data Base for Advances in Information Systems
In conjunction the IFIP 8.11/11.13 Working Group on Information Systems Security Research.

Published Since 1969 — 50 db — acm SIGMIS — Celebrating 50 years

We have become limited in our explication and investigation of behavioral security issues by the lack of new and innovative theories to guide our exploration. This may be due to the risks and hazards associated with the explication of new theoretical ideas in our field. The journals in which you would most wish your work to be seen generally are not overly welcoming of theory building so much as rigorous testing of existing theory, and, in any case, will very much "sequester" your intended theoretical contribution for at least 4 rounds of review and two or more years of process before acceptance to publication. In the meantime, your brilliant ideas lie dormant and unconsidered by the colleagues who are most interested in citing them (subsequently boosting your scholarly impact).

I propose to fast-track your very best theoretical thinking on IT Security in a special theoretical issue of *Data Base*, and I propose to do it strictly in the form of "think pieces." You need not "cash in" your data from an emerging study in order to give voice to and secure copyright for your most innovative thinking about the directions IT Security research should be taking.

Timeline:

Initial Submission	Due May 1, 2017
First Round Reviews returned	June 15, 2017
Revised Submissions	Due August 31, 2017
Second Round Reviews returned	October 15, 2017
Anticipated publication date	Vol. 49(1), February 2018

This process schedule amounts to what is realistically only a calendar year from start to finish from the current issue being prepared for production.

The Data Base submission system is found at http://www.editorialmanager.com/sigmisdb/

Questions or comments to the Special Issue Editor, Tom Stafford (Stafford@LaTech.edu). More information about The Data Base for Advances in Information Systems is available from Editors@TheDataBase.org.
